IN THE CLAIMS:

Please amend the claims as follows.

1. (Currently Amended) An electrically driven power steering apparatus comprising:

a housing;

a ball screw shaft extending within said housing and connected to a steering mechanism;

an input shaft to which a steering force is inputted;

an output shaft for receiving the steering force from said input shaft and outputting the steering force to said ball screw shaft;

a torque sensor for detecting a torque transferred between said input shaft and said output shaft;

a motor including a rotor; and

a ball screw nut for giving a force in an axial direction to said ball screw shaft by receiving a rotational force from said motor,

wherein said ball screw shaft is supported by the nut only, and

wherein an elastic member deforming and thus capable of absorbing an impact inputted from the side of said ball screw shaft, is disposed on a power transmission route between said ball screw shaft and said rotor of said motor.

2. (Original) An electrically driven power steering apparatus according to claim 1, wherein said elastic member is disposed between said ball screw nut and said rotor of

D

į;

said motor, and

the impact inputted from the side of said ball screw shaft is absorbed by a torsional damper effect.

3. (Previously Presented) An electrically driven power steering apparatus according to claim 2, wherein a displacement limiter for limiting a predetermined or larger quantity of deformation of said elastic member is provided and constructed of a recessed portion formed in one of said rotor of said motor and said ball screw nut and a protruded portion formed on the other, and

said protruded portion, when said elastic member deforms by the predetermined quantity, engages with said recessed portion.

4. - 13. (Canceled)

Also, please add the following new claims.

- -- 14. (New) An electrically driven power steering apparatus according to claim 1, wherein said elastic member is attached to a core metal.
- 15. (New) An electrically driven power steering apparatus according to claim 1, wherein said elastic member is formed from a rubber or a resin.
- 16. (New) An electrically driven power steering apparatus according to claim 1, wherein said elastic member is provided with at least a flange portion and a protrusion.

- 17. (New) An electrically driven power steering apparatus according to claim 1, wherein said elastic member is provided with engaging portions alternatively extending axially.
- 18. (New) An electrically driven power steering apparatus according to claim 1, wherein a diameter of said elastic member is less than a diameter of the nut.
